

The Bravo Green Commitment

At Bravo, we work with natural materials. Fieldstone and granite are created by Mother Nature. Quartz stone is created by recycling the waste stone that comes with granite. Glass is created from sand, and metals are naturally occurring elements.

We cut our materials with water, sand and diamonds. We finish our pieces with sandcarving and inkjet printing, which we ensure are very clean processes.

We recycle almost every waste product our operation creates. Indeed, this takes a real effort, but we think it's worth it.

If being green is important to you and your organization, you'll be glad to know it's always been important to us. Each Bravo piece is backed by our commitment to being green.
